

# HUMAN FACTORS INTERNSHIP OPPORTUNITIES

**We seek energetic and talented individuals to join our consulting team.**

Our team members work together and with clients to produce compelling user experiences and effective user interfaces. Our research activities include field observations of people interacting with complex systems and interviews with potential users of prototype devices. We design hardware and software user interfaces, as well as digital and print-based educational media. Our evaluation work ranges from quick-response product critiques to comprehensive usability tests.

Applicants should have an educational background related to human factors, visual and interaction design, industrial design, or sociology with a focus on ethnographic research.

Many of our recent projects have involved medical technologies, such as artificial heart pumps, hemodialysis machines, medical information management software, and surgical instruments. However, we also work on consumer products, websites, and business applications.

## Products we worked on recently:

If interested in this opportunity, please call us to discuss your background and any applicable professional experience. Alternatively, send us a resume, a cover letter explaining your interests, and a sample of your academic or professional work (if applicable).
